Application of Polyurethanes in Solar Panels

2019-5-8

PUdaily, Shanghai-- The world has limited reserves of fossil energy sources, which as non-renewable resources can cause air pollution, water pollution, soil pollution and other problems when being used. As a result, the development and utilization of renewable energy sources such as solar power, wind power and tidal power have received extensive attention and great progress has been made in this respect. Currently, solar panels are the most commonly used equipment. They are designed to convert solar energy into electric one to save energy. The service life of solar panels is generally required to be more than 25 years, which imposes strict requirements on the quality of their components...[More](#)
